

## Labcorp Development Feedback: Public Consultation on Proposed Advisory Guidelines on Use of PD in AI Recommendation and Decision System.

### Summary of major points

It is noted that 'Part I: Introduction and Scope' aims to protect citizens' personal data and that the scope and advisory guidelines have been indicated. 'Part II: Submission of Comments addresses the use of personal data in AI system development, testing and monitoring' with AI examples provided that are exception to the rule.

### Comments

Having listed the exceptions under Part II, sections 4, 5 & 7, it is unclear what type of AI use cases would be directly impacted. It would be good to provide some real-world examples related to these sections to further identify and relate to our business implication.

### Conclusion

At Labcorp, we recognize the power and potential of artificial intelligence (AI) and machine learning technology to revolutionize healthcare. Our AI team is building models that augment human decision making and provide internal efficiencies. It would be useful to further understand the guidelines by having real-world examples and how it relates to the application to research improvement, exception and data protection considerations.
